

# COAST GUARD-54 LED SOLAR FLOOD LIGHT

The Coast Guard-54 LED Solar Flood Light is powered by a solar module which can be positioned up to 10 feet away from the light itself. This unit was developed due to the frequent requests from customers who wanted the same light output as the Detector-54 but all night as opposed to a motion sensor light. The model has a bracket and built-in 7Ah lead acid rechargeable battery.

Due to the body being ABS plastic, this unit is ideal for coastal regions as there will be no corrosion on the body parts.

Unit: WGGJ22  
Category: Security Flood Light  
Rating: IP44  
Voltage: 12V  
Applications: Building security for commercial, industrial and residential use. Internal and external

54 Super Bright LED's give a high powered beam illuminating approximately 100m<sup>2</sup>

12V 7Ah Lead Acid rechargeable battery

18V, 10W Solar Panel, built in circuit to prevent overcharge

Automatic Day/Night Switch

Durable ABS plastic construction, easy to install, hardware included

Completely solar powered, no electrical wiring needed
